AEgis Will Assist Anteon On Military Contract

HUNTSVILLE—The Joint Forces Command (JFCOM) selected the Anteon team to be the technical support staff for the Advanced Training Technologies Laboratory. Huntsville's AEgis Technologies, which was picked by Anteon to provide Modeling & Simulation expertise, will provide direct technical support in the area of live, virtual and constructive simulations. AEgis will participate in the integration of multiple simulations into large-scale training federations directly stimulating digital combat systems.

The mission of the Joint Advance Training Technology Laboratory is to find, encourage the development of and validate technologies prior to introduction into the LVC training environment at JFCOM in Suffolk, Virginia. Those validated technologies will become part of the Joint National Training Capability (JNTC). In this position, AEgis will enjoy the opportunity to influence the direction of simulation and its impact on training initiatives throughout the Department of Defense.

The Anteon winning contract will be a five-year effort and provides AEgis with an opportunity to expand into a new customer base. As a member of the Anteon team, AEgis will directly support war fighters from all branches of the armed forces as well as support of U.S. allies.

In addition to the Anteon connection, Aegis has launched Xcellon, the new Products Division of AEgis.
