AEgis Awarded Contract from CAE for 3D Models

HUNTSVILLE, AL, Feb 25, 2008 – AEgis Technologies Group, Inc announced today that is has been awarded a contract from CAE USA to produce 3D visualization models for CAE’s use on the US Navy MH-60R and SH-60B Tactical Operation Flight Trainers (TOFTs). The MH-60R TOFT model set will show non-U.S. vessels and aircraft, including UAVs, likely to be encountered by aircrews in both friendly and conflict scenarios.

The models produced by AEgis represent the out-the-window (OTW) views of the ships and other platforms, and must have all of the key geometric features necessary for visual recognition. The models must also have a standardized real-time interface implementation to include; optimized polygons and textures, articulated parts, multiple levels of detail (LODs), light points, and proper landing deck markings, in order to support high fidelity flight simulation. One of the more challenging aspects to the project is the research performed by AEgis in order to find sufficient images, drawings and other documentation necessary to produce accurate and detailed models of the target vessels required by the Navy.

About AEgis: AEgis has 19 years experience in providing expert modeling and simulation consulting services and outstanding products to industries utilizing modeling and simulation throughout the world. We create innovative solutions to challenges requiring specialized modeling and simulation knowledge; expertise in simulation and software development, simulation integration, and analysis; training simulator development; HLA/DIS technologies; C4I-to-Simulation interoperability; and Modeling and Simulation VV&A programs for software/simulations.
