For Immediate Release

**AEgis Technologies provides Integrated Air and Missile Defense Project Office Critical Technology Protection Support**

**Huntsville, Alabama, November 4, 2009** – The US Army Integrated Air and Missile Defense (IAMD) Project Office has retained AEgis Technologies to provide program protection planning support. The support includes developing a program protection team charter, conducting critical technology/critical program information assessments, and completing an Interim Program Protection Plan.

Upon receiving the Multi-Discipline Counterintelligence Threat Assessment (MDCTA) from the Army Counterintelligence Center, AEgis will complete a vulnerability analysis and identify countermeasures. AEgis' staff of Systems Security Engineer's and Program Protection Planning Experts have provided continuous support to the Government in identifying CT/CPI and program protection planning to prevent unofficial disclosure of CT/CPI that could significantly impact weapon systems combat effectiveness.

"AEgis Technologies' support to the IAMD Project Office in provision of expert analysis of technologies within the IAMD systems and in identification of those critical technologies and program information that require protection will mitigate the risk of exploitation of CT/CPI and ensure the operational effectiveness of the IAMD system through proper risk management strategies. AEgis Technologies is excited to be utilizing our expertise to contend with the broad issues Technology Protection presents," said Chuck Vaughan, Technology Protection Program Manager.

AEgis Technologies provides Subject Matter Expertise in Critical Technology Identification and Protection Planning and has extensive experience with DoD guidance governing critical technology and program information protection. Utilizing a layered approach to program protection, AEgis Technologies offers CT/CPI solution to the Department of Defense Systems Acquisition environments using proven CT/CPI identification, CT/CPI threat vulnerability analysis methodologies and processes supporting protection/security requirements.

(more)

“We are very proud of the AEGIS Technologies team members that support this initiative. Our goal is to provide a thorough assessment and advise the Government on the best risk mitigation approach suited for critical technology protection. We are meeting that goal for the IAMD Project Office and will continue to examine and provide recommendations for alternative protection solutions,” said Alleen Bray, AEGIS Verification, Validation and Accreditation (VV&A) Director.
